

0.1 easy lists

Here's a bulleted list

- this is a list
- more items
- even more items

Here's a list of numbers

1. this is a numbered list
2. another one

Here's a list of descriptoins

test test another textu which also we want to start looking like lorem ipsum
but it's much easilr because we can just ranambel adn we dont's eve
nacarte ew;i awioehksajdlkjn

another one here's another one and as you can see,

0.2 customization

!! this is a list

hello more items

even more items

1. this is in the outer list
 - hello!
 - hello!
 2. here we are again!
1. this is in the outer list
 - (a) hello!

(b) hello!

2. here we are again!

- this is in the outer list

- hello!

- hello!

- here we are again!

QwAcK this is in the outer list

smallerQwack hello!

smallerQwack hello!

QwAcK here we are again!

we are at 2or ii if you're interested in roman numbers

0.3 using list

1. asdf

2. asdf

3. asdf

0.4 enumitem package demo

the whole deal with the boxlabel shows how hacky a custom list can be. Therefore, there is an easier package out there that prevents the complications.

WW1. asdf asdf asdf asdf asd

WW2. test again
